Seven states in the U.S. West are facing a deadline from the federal government. A project in the country's top coal-producing area seeks to pump the carbon dioxide produced by burning that into deep underground. Apple reportedly recently tested ads in Apple Maps and may add them to the Apple Podcasts and Apple Books apps. Officials say a loud "boom" was heard across areas of northern Utah and was likely a meteor. America sizzled through some hot nights last month, enough to make history. America sizzled through some hot nights last month, enough to make history. An unprecedented drought is afflicting nearly half of the European continent. Facebook is testing end-to-end encryption as a default on its Messenger app. Chinese tech giant Huawei says its revenue fell in the first half of 2022 but new ventures in autos and industrial technology helped to offset a decline in smartphone sales under U.S. sanctions. An unprecedented drought is afflicting nearly half of the European continent and is damaging farm economies, forcing water restrictions and threatening aquatic species. ABC News' Phil Lipof spoke with barber and TikTok star Vic Blends about offering free haircuts to people, giving back, and creating the first barbering school for California prisons. Federal water-safety investigators are looking into the death of an Amazon worker and an injury that potentially led to the death of another employee. More than 1,000 firefighters in France are struggling to contain a huge wildfire burning through pine forests. Landfills are releasing large amounts of planet-warming methane gas into the atmosphere from the decomposition of waste and are a significant contributor to such emissions in urban areas, a study suggests. Plus, LG announced a new 97-inch OLED EX TV panel that debuts the company's Cinematic Sound OLED and teens' addiction to social media has nearly doubled since 2014. More than 1,000 firefighters are struggling to contain a major wildfire that has burned a large area of pine forest in southwestern France in a region that was already ravaged by flames last month. The move comes ahead of his court battle with Twitter. Disney said it is raising prices for streaming subscribers in the U.S. who want to watch Disney+ without ads or more viewers switch to what CEO Bob Chapek described Wednesday as the "best value in streaming." A cybersecurity startup informed a major Indian online insurance brokerage last month that critical vulnerabilities in its network could expose sensitive personal and financial data from at least 11 million customers. The new tools do offer some help, but they also share some deeper flaws. China is criticizing a U.S. law to encourage processor chip production in the United States and reduce reliance on Asian suppliers as a threat to trade and an attack on Chinese business. The tech company's Galaxy Unpacked event is expected to unveil new foldable smartphones. The semiconductor shortage is hitting another of the world's automakers, despite demand for product. A former Twitter employee has been convicted of spying for Saudi Arabia, conspiracy to commit wire fraud and money laundering. The family center aims to promote conversation between parents and minors about safe social media practices. The icon was originally removed due to it being difficult to read. A Russian rocket has successfully launched an Iranian satellite into orbit. A new study finds climate hazards aggravate more than half of the known diseases that infect people. Axios Media is being acquired by Cox Enterprises, which says it plans to push the online news provider into new markets while broadening its coverage. The company said the vulnerability discovered in January didn't compromise user passwords, but some personal information may have been exposed. A new philanthropic project hopes to invest \$100 million in up to 10 countries mostly in Africa by 2030 to support up to 200,000 community health workers. Japanese technology company SoftBank Group posted a \$23 billion loss in the April-June quarter as the value of its investments sank amid global worries about inflation and interest rates. Elon Musk said Saturday his planned \$44 billion takeover of Twitter should move forward if the company can confirm some details about how it measures whether user accounts are "spam bots" or real people. China has cut off climate talks with the U.S. — imperiling future global climate negotiations, but not necessarily blunting the impacts of significant climate actions at home in both countries. Two crashes involving Teslas apparently running on Autopilot are drawing scrutiny from federal regulators and point to a potential new hazard on U.S. freeways: The partially automated vehicles may not stop for motorcycles. Twitter says vulnerability in its software that exposed an undetermined number of owners of anonymous accounts to potential identity compromise last year was apparently exploited by a malicious actor. Amazon on Friday announced it has entered into an agreement to acquire the vacuum maker iRobot for approximately \$1.7 billion. Elon Musk accused Twitter of fraud in a countersuit over his aborted \$44 billion deal for the social media company, which he said held back necessary information and misled his team about its true user base. The two have a combined 92 million subscribers and will merge sometime next summer. The delay of the software will take about a month, according to reports. Passenger trips in early spring and summer were up 25% over the same period last year. Vehicle previously owned by another Ford for the 1980 comedy film, see Used Cars. This article needs additional citations for verification. Please help improve this article by adding citations to reliable sources. Unourced material may be challenged and removed. Find sources: "Used car" - news - newspapers - books - scholar - JSTOR (August 2017) (Learn how and when to remove this template message) Small used car lot in the United States. Typical new car dealership selling used cars outside the showroom. A used car, a pre-owned vehicle, or a secondhand car, is a vehicle that has previously had one or more retail owners. Used cars are sold through a variety of outlets, including franchise and independent car dealers, rental car companies, buy here here dealerships, leasing offices, auctions, and private party sales. Some car retailers offer "no-haggle prices," "certified" used cars, and extended service plans or warranties. Used car industry Used car export industry See also: List of countries by car exports See also: Phase-out of fossil fuel vehicles § Second-hand vehicle dumping Depreciation levels of vehicles differ a lot in exporting and importing countries due to differences in income levels. The price of a vehicle depreciates faster in high-income countries than in low-income countries. Used vehicles sellers in high-income countries can thus sell their used vehicles for a higher price in low-income countries. This is the incentive to export used vehicles.[1] The major car exporting countries (which includes both new and used vehicles) are Japan, the EU, USA, and Canada.[1] In the EU, 60% of used cars are marketed in other EU countries. The used car exports in the EU are focused on East Europe, the Caucasus, Central Asia, and Africa.[1] In the US, used vehicle exports are focused on Mexico, Nigeria, and Benin.[1] The African continent gets 90% of its imports from Europe [2] and many of these cars would not meet European emissions. Used car industry in the USA Established in 1898, the Empire State Motor Wagon Company in Catskill, New York was one of the first American used car lots.[3] The used vehicle market is substantially larger than other large retail sectors, such as the school and office products market (US\$206 billion in estimated annual sales) and the home improvement market (US\$291 billion in estimated annual sales).[citation needed] With annual sales of over US\$350 billion, the used vehicle industry represents almost half of the U.S. auto retail market and is the largest retail segment of the economy. In 2016, about 17.6 million used cars and trucks were sold in the United States, and 38.5 million were sold worldwide.[4] Used vehicle retailer A sign for a used car dealership in Utah in 1981. The Federal Trade Commission recommends that consumers consider a car retailer's reputation when deciding where to purchase a used car.[5] Vehicle history reports In 2006, an estimated 34% of American used-vehicle buyers bought a vehicle history report.[6] Vehicle history reports are one way to check the track record of any used vehicle. Vehicle history reports provide customers with a record based on the vehicle's vehicle identification number (VIN). These reports will indicate items from a vehicle history, such as vehicle title branding, lemon law buybacks, odometer fraud, and product recall. The report may indicate minor/moderate collision damage or improper vehicle maintenance. An attempt to identify vehicles that have been previously owned by hire car rental agencies, police and emergency services or taxi fleets is also made. Consumers should research vehicles carefully, as these reporting services only report the information to which they have access. In some countries, the government is a provider of vehicle history, but this is usually a limited service providing information on just one aspect of the history, such as the United Kingdom's Ministry of Transport history. The U.S. Department of Justice's National Motor Vehicle Title Registration System has only about a dozen approved data providers, about half of which sell car history data to consumers; the rest work only with car dealers. None of them are currently free of charge to consumers and many are not free even to the car dealers.[7] The Better Business Bureau recommends using one of these approved data providers when researching a used car.[8][9] The history reports use several sources to gather the data for each vehicle, including the police, the Driver and Vehicle Licensing Agency (DVLA), finance houses, the national mileage register, insurance companies, and industry bodies.[10] Several of the services, most notably those in the United Kingdom and the United States, sell reports to dealers and then encourage the dealers to display the reports on their Internet sites. These reports are paid for by the dealer and then offered for free to potential buyers of the vehicle. In the UK, the DVLA provides information on the registration of vehicles to certain companies for consumer protection and anti-fraud purposes. Companies may add to the reports of additional information gathered from police, finance, and insurance companies. Car history check services are available online for the public and motor trade companies. In India, the Ministry of Road Transport and Highways is responsible for providing information related to vehicle registration and service history.[11] Used car pricing Used car pricing reports typically produce three forms of the pricing information. Dealer or retail price is the price expected to pay if buying from a licensed new car or used-car dealer. Dealer trade-in price or wholesale price is the price a shopper should expect to receive from a dealer if trading in a car. This is also the price that a dealer will typically pay for a car at a dealer wholesale auction. Private-party price is the price expected to pay if buying from an individual. A private-party seller is hoping to get more money than they would with a trade-in to a dealer. A private-party buyer is hoping to pay less than the dealer retail price. The growth of the Internet has fueled the availability of information on the prices of used cars. This information was once only available in trade publications that dealers had access to. There are now numerous sources, such as online appraisal tools and internet classified ads, for used car pricing.[12] Multiple sources of used car pricing means that listed values from different sources may differ. Each pricing guide receiving data from different sources and makes different judgments about that data. The pricing of used cars can be affected by geography. For example, convertibles have a higher demand in warmer climates than in cooler areas. Similarly, pickup trucks may be more in demand in rural than urban settings. The overall condition of the vehicle has a major impact on the price. There is much subjectivity in how the condition of a car is evaluated.[13] There are various theories as to how the market determines the prices of used cars sold by private parties, especially relative to new cars. One theory suggests that new car dealers are able to put more effort into selling a car, and can therefore stimulate stronger demand. Another theory suggests that owners of problematic cars ("lemons") are more likely to want to sell their cars than owners of perfectly functioning vehicles. Therefore, someone buying a used car bears a higher risk of buying a lemon, and the market price tends to adjust downwards to reflect that.[14] Laws and regulations Geographically specific laws This section needs additional citations for verification. Please help improve this article by adding citations to reliable sources. Unourced material may be challenged and removed. (December 2019) (Learn how and when to remove this template message) Africa There are some 54 African countries that set import age restrictions on used vehicle imports, while 27 African countries do not place any import restrictions on used vehicle imports, and just 5 African countries (Egypt, South Africa, Sudan, Morocco) ban all used vehicle imports. Mauritius, Seychelles, Algeria, and Chad set an age restriction of 3 years Gabon and Senegal set an age restriction of 4 years Libya, Mozambique, Niger, and Tunisia set an age restriction of 5 years Côte d'Ivoire sets an age restriction of 7 years Kenya, Mauritania, Namibia set an age restriction of 8 years Eritrea, Benin, Democratic Republic of Congo set an age restriction of 10 years Liberia, Nigeria and Eswatini set an age restriction of 12 years Gambia, Ghana, Mali, Côte d'Ivoire, and Cape Verde have also implemented punitive taxation for vehicles beyond a certain age. Algeria also has an internal consumption tax and Uganda has an environmental tax.[1] Zambia and South Africa also have an inspection test requirement as a precondition to vehicle registration on vehicle imports[1] Asia China See also: Chinese used vehicle exporting Japan See also: Japanese used vehicle exporting Japan has an inspection tests as a precondition to vehicle registration on vehicle imports[1] Europe European Union Used cars have a statutory warranty according to the system of laws of the European Union, the so-called "Liability for defects", which lasts for 12 months.[15] North America Canada In Ontario, Canada, new and used vehicle sales are regulated by the Ontario Motor Vehicle Industry Council (OMVIC). In Alberta, Canada, new and used vehicle sales are regulated by the Alberta Motor Vehicle Industry Council (AMVIC). Transport Canada mandates that all vehicles that are not made to comply with U.S. Federal Motor Vehicle Safety Standards are only eligible for importation if its age is 15 years old and above. United States See also: American used vehicle exporting Used vehicles usually must be 25 years or older to be imported, but that requirement can be waived if a Show or Display exemption is given. The exemption for Show or Display limits the mileage to 2,500 miles (4,023 Kilometers) a year, and only select cars are eligible for the exemption. Canadian-market vehicles can also be federalized under separate regulations. There are no age limits for used car exporting. Used cars can be exported at any time regardless of age or condition. Central America Panama has a used vehicle import age restriction of 10 years, while Mexico has an age restriction of 5 years.[1] In the Caribbean, most countries have age restrictions on used vehicle imports.[1] South America Bolivia, Paraguay, and Peru are the only countries in South America that allow used vehicle imports. Paraguay has a used vehicle age limit of 10 years, while Peru has it set to 5 years.[1] Oceania Australia In the Australian state of Queensland, when the odometer reading is fewer than 160,000 kilometres (99,000 mi), and the car was manufactured less than 10 years before the sale date, the warranty is three months or 5,000 kilometres (3,100 mi), whichever happens first. If the odometer reading is 160,000 kilometres (99,000 mi) or more, or the car was manufactured 10 years or more before the sale date, there is no warranty. Also, motorcycles, caravans, and commercial vehicles do not have a warranty at all. A commercial vehicle is a car with nine seats or more, as well as a vehicle that is able to carry one ton of goods, unless it is a utility, which is a car designed to carry goods. For example, a Holden Commodore Utility or a Ford Falcon Utility. As these are cars that come with the back section being part of the car's body. Other vehicles that have an interchangeable back section are regarded as cab chassis and the back of the vehicle can be ordered from the factory or can be custom-built to suit the needs of the vehicle buyer. The same as a light truck can be ordered as a tip truck or a body truck See also Certified Pre-Owned Car supermarket Grey import vehicle Decreit car Lemon (automobile) References ^ a b c d e f g h i j "Used Vehicles: A Global Overview" (PDF).
